EDUCATION

Purdue University

B.S. Data Science (Computer Science)

West Lafayette, IN

May 2028 | **GPA: 3.71**

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Foundations of Computer Science, Introduction to Machine Learning, Numerical Methods, Statistical Theory, Introduction to Data Science

EXPERIENCE

Software Engineering Intern

NI @ Emerson

May 2026 – Current

Austin, TX

- Architected a client-facing CLI automating private AI deployment within Azure for **30+ Fortune 100 customers**.
- Designed air-gapped application installer, private-by-default networking, and Azure DevOps CI pipeline, **unlocking new customers** in aerospace, defense, and government.
- Shipped as the primary method for private deployment of NI's flagship AI service, reducing customer deployment time from **3 days** to **2 hours**.

Measurement Software Engineer

Continuity Pharma

September 2025 – April 2026

West Lafayette, IN

- Developed a full-stack real-time monitoring system using React.js and Node.js (Express) to continuously track metrics with **sub-second latency**, enabling a **90% reduction** in manual equipment monitoring time.
- Engineered data pipeline to process and store **over 2 million data points daily** from on-site manufacturing equipment using MongoDB.

Project Manager

Purdue Data Mine

January 2026 – Current

West Lafayette, IN

- Led a team in the development of a **state-of-the-art research database** for Mead Johnson Reckitt R&D division.
- Developed a multi-step LLM generation/validation pipeline to impute omissions, yielding an unprecedented corpus of **91,000** data points.
- Consistently upheld Agile methodology through planning and delegation of tasks, exceeding client expectations.

Vice President of Marketing

Purdue Stack

April 2026 – Current

West Lafayette, IN

- Built an end-to-end recruitment/marketing analytics platform, driving **10,000+ website visits** and **500+ applications**.
- Led efforts across social media, events, partnerships, and digital platforms, resulting in **7** new company partnerships.

Software Engineering Intern

Spring Education Group - Schools of Paragon

June 2025 – August 2025

Austin, TX

- Built an educational analytics dashboard utilizing Next.js (React) and FastAPI enabling **65% faster** longitudinal assessment of performance on exam questions.
- Deployed to internal servers to inform curriculum changes across **2 departments, 5+ classes and 200+ students**.

PROJECTS

Redub | *Modal, Cloudflare D1/R2, FastAPI, React*

- Orchestrated a GPU environment on Modal, **cutting compute costs by 67%** compared to industry leader HeyGen.
- Architected a **5-step** end-to-end ML pipeline, automating a 48hr+ process into a single-click workflow.
- Harnessed Modal's serverless scaling to deliver per-user voice optimization, preserving vocal nuance across languages.

Protein Function Prediction Optimization | *Shell, Perl, Ruby, Python* | kiharalab.org/pfp

- Optimized predictive models by integrating modern sequence alignment tooling, enabling **4x faster queries**.
- Refactored sequence function annotation tool code base, **reducing code size by 33%**.
- Utilized by clinical researchers as the official protein function prediction tool of the KiharaLab Bioinformatics Suite.

TECHNICAL SKILLS

Languages: Python, Rust, Java, JavaScript, Bash, MATLAB, R, C++, Swift, SQL

Frameworks: React, Next.js, Node.js, FastAPI, Django, Flask, Tailwind CSS

Developer Tools: AWS, Azure, GCP, MySQL, PostgreSQL, MongoDB, Agile, Linux, Vercel, NoSQL, OAuth, Shell Scripts, Git, GitHub, CI/CD, Docker, Kubernetes, Cloudflare, Bicep, Terraform
